LETTER OF TRANSMITTAL

THE PANAMA CANAL,
HEALTH DEPARTMENT,
Balboa Heights, April 29, 1919.

COL. CHESTER HARDING,
*Governor, The Panama Canal,
Balboa Heights, C. Z.*

SIR: I have the honor to submit the following report of the operations of the Health Department for the quarter January, February, and March, 1919.

Lieut. Col. A. T. McCormack, Chief Health Officer, was relieved from duty January 23, 1919, by War Department orders, and Maj. R. L. Loughran, Superintendent of Ancon Hospital, was made Acting Chief Health Officer, pending the arrival of the undersigned, who was appointed Chief Health Officer, effective March 31, 1919.

Respectfully,

H. C. FISHER,
Chief Health Officer.

PERSONNEL.

Many changes have occurred in the organization of the department during the quarter. When the Superintendent of Ancon Hospital was made Acting Chief Health Officer, January 24, 1919, the Chief of the Medical Clinic, Dr. R. C. Connor, was made Acting Superintendent; and the Assistant Chief of the Medical Clinic, Dr. F. F. Monroe, was designated Acting Chief of the Medical Clinic.

Other changes have been as follows: Capt. G. G. Marshall, M. C., Chief of the Eye and Ear Clinic, was relieved by Lieut. A. F. Ryan, M. C.; the position of Chief Sanitary Inspector was vacated by the Chief Health Officer's orders directing Capt. D. P. Curry, M. C., Chief Sanitary Inspector, to duty with the Eye and Ear Clinic; Lieut. C. M. Ming, M. C., Chief of X-ray Clinic, was relieved by Capt. L. S. Townsend, M. C.; Capt. W. L. McFarland, M. C., Chief of Board of Health Laboratory, was relieved by Capt. L. B. Bates, M. C., who was returned from the service of the Medical Department of the Army in the United States. In addition to this, many other changes have taken place among doctors, nurses, and sanitary inspectors.

GENERAL REMARKS.

The health in the Canal Zone and terminal cities has continued good, except for the usual increase in malaria, which occurs at this

time of the year, among the jungle-clearing gangs of the Cattle Industry.

The communicable diseases have been, in general, as follows:

Typhoid fever.—Three cases were admitted to hospital in January; 1 from Colon, traced to a carrier; 1 from the interior; and 1 from a ship passing through the Canal; no cases in February, and 2 in March.

Diphtheria.—Eight cases occurred in January, 7 of which were in Panama and 1 at Coco Solo; in February there were 5 cases in Panama, 3 in Cristobal, and 5 in Colon; in March, 1 case in Panama, 2 in Cristobal, and 2 in Colon.

Influenza.—A total of 188 cases for the quarter.

Pneumonia.—Twenty-eight cases were reported, of which 7 were from passing ships.

Meningitis.—Three cases reported, 1 from France Field, 1 from Las Cascadas; the third, a suspect, was not proven.

Mumps.—Twenty-three cases reported during the quarter.

Measles.—Twenty-one cases were reported.

Chickenpox.—Thirty-five cases reported.

Dysentery.—Thirty-two cases reported.

Leprosy.—Two cases were picked up and sent to the leper asylum.

Smallpox.—Forty-six cases admitted to hospital from Panama, Colon, and the interior. All but 10 cases have been discharged well, and those remaining in hospital are in good condition; no deaths.

Tetanus.—One case, which recovered, occurred in a boy living in Balboa.

There have been no cases reported of the following diseases: scarlet fever, German measles, pellagra, and beriberi.

Yellow fever.—One case was brought to the Isthmus from Guayaquil, Ecuador, January 30, 1919. The last case previously brought to the Isthmus was on December 10, 1915. The last case originating on the Isthmus occurred in November, 1905.

VITAL STATISTICS.

EMPLOYEES.

The following statistics are based upon the average number of names appearing on the pay rolls of The Panama Canal and the Panama Railroad Company for the three months ending March 31, 1919, which was 26,236, as compared with 25,122 for the preceding three months, and 28,349 for the corresponding three months of last year.

Admissions to hospitals and quarters numbered 3,330, giving an admission rate of 507.68,¹ as compared with 412.08 for the preceding three months, and 328.90 for the corresponding three months of last year.

The constantly noneffective rate was 16.74 as compared with a rate of 11.55 for the preceding three months, and 9.93 for the corresponding three months of last year.

¹All morbidity and mortality rates are computed as equivalent annual per thousand.

Deaths from all causes numbered 46; of these, 40 were from disease, giving a rate of 6.08 from disease alone, as compared with a rate of 6.20 for the preceding three months and 5.64 for the corresponding three months of last year.

Diseases causing the highest admission rates to hospitals, in the order of their numerical importance, were (1) malaria, (2) venereal diseases, (3) influenza, (4) diseases of the eyes and their annexa, and (5) organic diseases of the heart. These five diseases caused 28 per cent of all admissions to hospitals, malaria alone causing 12 per cent and venereal diseases 8 per cent of total admissions.

The admission rate for malaria, hospitals and quarters, for the quarter year ending March 31, was 35.36, as compared with a rate of 18.31 for the preceding three months, and 16.79 for the corresponding three months of last year. The constantly noneffective rate from malaria for the quarter year ending March 31, was 5.20, as compared with a rate of 1.08 for the preceding three months and 0.85 for the corresponding three months of last year.

By race.—For disease only, the admission rate to hospitals and the death rate for white employees were 227.60 and 0.88, respectively, as compared with 227.03 and 4.52 for the preceding three months and 227.18 and 5.30 for the corresponding three months of last year. For black employees, for disease only, the admission rate to hospitals and the death rate were 185.92 and 7.20, respectively, as compared with 128.48 and 5.80 for the preceding three months and 106.45 and 5.71 for the corresponding three months of last year.

The constantly noneffective rates were 16 for whites and 16.90 for blacks.

The admission rate to hospitals and quarters for malaria was 15.72 for white and 39.52 for colored employees, as compared with 9.92 for white and 20.08 for colored employees for the preceding three months and 16.79 for white and 23.67 for colored employees for the corresponding three months of last year.

CANAL ZONE.

The civilian population of the Canal Zone, based on the police census, taken as of June 20–30, 1918, is 21,707. From this population, 41 deaths occurred during the three months' period ending March 31, 1919, 38 of which were from disease, giving a rate of 7 from disease alone, as compared with a rate of 8.12 for the preceding three months and 10.98 for the corresponding three months of last year.

Of the deaths from disease, 45 per cent occurred among children under 5 years of age, as compared with 34 per cent for the preceding three months.

One hundred and forty-one births were reported for the three months' period ending March 31, 1919, giving a birth rate of 26. Of these births 53 were white and 88 colored.

Eleven deaths occurred among children under 1 year of age, all colored, giving an infant mortality rate, based on the number of births reported, of 125 for colored children, with a general average of 78.02 for 1,000 births.

Of the total births reported, 7 per cent were stillbirths.

PANAMA CITY.

The population of the city, as shown by the health department census of June, 1917, is 61,369; in this population is included approximately 8,000 employees of The Panama Canal. From this population 278 deaths occurred during the three months' period ending March 31, 1919, 266 of which from disease, giving a rate of 17.32 from disease alone, as compared with a rate of 21.36 for the preceding three months and 18.51 for the corresponding period of three months of last year.

Of the total deaths from disease, 38 per cent occurred among children under 5 years of age, as compared with 44 per cent for the preceding three months.

The principal causes of death, as compared with the preceding three months, were as follows:

	October- December, 1918.	January- March, 1919.
Tuberculosis (various organs).....	67	63
Pneumonia (broncho and lobar).....	38	35
Nephritis (acute and chronic).....	23	25
Diarrhea and enteritis.....	35	21
Organic heart disease.....	17	11

Five hundred and thirty-two births were reported during the three months' period ending March 31, giving a rate of 34.68.

Sixty-five deaths occurred among children under 1 year of age, giving an infant mortality rate, based on the number of births reported, of 122.18.

Of the total births reported, 5 per cent were stillbirths.

COLON.

The population of Colon, as shown by the health department census of June, 1917, is 26,078; in this population is included approximately 7,000 employees of The Panama Canal. From this population, 127 deaths occurred during the three months' period ending March 31, 1919, 117 of which were from disease, giving a rate of 17.96 from disease alone, as compared with a rate of 22.36 for the preceding three months, and 18.71 for the corresponding three months of last year.

Of the total deaths from disease, 32 per cent occurred among children under 5 years of age, the same percentage as for the preceding three months.

The principal causes of death as compared with the preceding three months, were as follows:

	October- December, 1918.	January- March, 1919.
Tuberculosis (various organs).....	29	28
Pneumonia (broncho and lobar).....	18	20
Diarrhea and enteritis.....	11	12
Nephritis (acute and chronic)....	12	11
Organic heart disease.....	9	10

One hundred and eighty-seven births were reported during the three months' period ending March 31, 1919, giving a rate of 28.68.

Twenty deaths occurred among children under 1 year of age, giving an infant mortality rate, based on the number of births reported, of 106.95.

Of the total births reported, 9 per cent were stillbirths.

DIVISION OF SANITATION.

ZONE SANITATION.

The usual activities in Zone sanitation, consisting largely of anti-mosquito work, have been vigorously pursued during the quarter. A number of tile and stone drains have been installed in the Pedro Miguel sanitary district, on the east side of the Pedro Miguel river and lake, also on the hillsides east of the main line of the Panama Railroad near Paraiso. This work has been almost entirely within the pastures of the Cattle Industry, and has had for its object the elimination of anopheles breeding areas which were being punched up by the cattle. The edges of the lakes about Pedro Miguel and Red Tank were cleared and cleaned on account of the anopheles breeding which was found at these places; for some reason, which was not entirely understood, these areas had not given much trouble until this year; larvæ had been found in a few isolated areas, but not so generally distributed as during this quarter. At present this is controlled by oiling and grass cutting about water line.

In the Ancon-Corozal district, considerable amount of new work has been done, consisting of straightening the stream which runs through the Corozal garden in its course between the new road and the Panama Railroad embankment.

On the flat just north of this stream, new tile drains were laid and several hundred feet of old 10-inch tile were taken out and replaced by 6-inch concrete tile. The stream which runs down in the section of this district between the upper and lower Corozal pastures, was straightened, graded, and lined with concrete.

In Espinosa's pasture (Corundu River section), the drainage is being taken care of by subsurface tiling.

Balboa district.—Very little permanent work has been done within the district proper. Considerable drainage work has been done at Farfan, in order to protect the men in the Cattle Industry jungle-clearing camp, also to eliminate the possible menace of mosquito flights from this area into Balboa.

In the Gatun district the work has been principally of a maintenance nature, except for straightening a great many of the old rock bed streams, in the old drainage systems. At Mindi swamp a rather extensive system of drains has been put in which has considerably improved this large swamp and which should help decrease the anopheles flight into Gatun.

In addition to the above, considerable time has been put in by the Division of Zone Sanitation in prophylactic work against smallpox. The villages of Arraijan, Escobal, New Providence, New Limon, and El Vigia (all points of ready access to the Canal Zone), have been inspected and about 1,000 people vaccinated. No active cases of smallpox were found in any of these places with the exception of Escobal, where 14 cases of mild smallpox were discovered.

The following is a tabulation of the malaria incidence for the quarter by locality and type, for employees only:

Number of employees admitted with each type.

From—	E. A.	Tertian.	Quartan.	Undetermined.	Clinical.	Total.
Regularly sanitized districts in Zone:						
Fort Amador.....		1				1
Balboa.....	3	2				5
Ancon.....		*2				2

Panama.....	10	†3				13
Las Savanas.....	1					1
Interior, Republic of Panama.....	1	1				2
Grand total.....	129	45	2	56		232

* Two recurrent.

† One recurrent.

The tabulation shows that the principal source of infection was without the regular sanitated areas. The incidence within the sanitated area was 18.6 per cent of the cases reported, with 81.4 per cent of cases reported coming from jungle camps or other points outside of the regularly sanitated areas.

PANAMA HEALTH OFFICE.

The last case of smallpox reported in the city was on March 11, 1919. There was a total of 37 cases during this quarter, as compared with 46 and 58 in the two preceding quarters. All cases were sent to Ancon Hospital.

During the quarter, 1,316 vaccinations have been made in the city. A general house-to-house vaccination is being done. This work is valuable in that it will, as time goes by, result in complete vaccination of all persons in the city, thereby preventing a recurrence of such an outbreak as that of last summer.

The veterinarian attached to this office is in every way qualified to do the milk and dairy inspection work, but his time is very much occupied with meat and cattle inspection, and it will not be possible for either the meat and cattle inspection work or the dairy and food inspection work, to be done properly. The need of another veterinarian is urgent.

The food inspection has been turned over temporarily to the district sanitary inspectors.

About 64,000 yards of ditches were cleaned in preparation for the rainy season. A large portion of this work was in the Savanas district where much ditching has been done, many water holes filled, and the portion which we have sanitated can be easily controlled hereafter.

In connection with the question of sanitation of the Savanas district, a comprehensive survey of this district is necessary in order that it may be thoroughly sanitated; this should be done on account of the great number of people who live there during about six months of the year. This district is responsible for a large number of malaria cases which can be easily eliminated in the future.

We have shortened many ditches, and filled a large number to a proper grade so that no water holes are left; this policy is being continuously pursued, and although our reports show that cleaning and oiling of the remaining ditches is done several times oftener than previously, a reduction in oil used has been made as follows:

Number of gallons of oil used during the first quarter of 1916, 6,530; 1917, 6,168; 1918, 2,400; 1919, 1,762.

Two hundred and forty fines were imposed during the quarter for violation of sanitary regulations. The imposition of these fines has a very marked effect upon maintaining sanitary conditions in the city, as threats do not avail, and the ordinary small fine imposed seems to be the best method of controlling the bulk of the population.

In the matter of building inspection, especial attention is being paid to overcrowding and its necessary sequence, ventilation. We have had little, if any, trouble in having the orders of our building

inspector carried out. Three buildings were condemned as unsafe and unfit for occupation, two of which were demolished. Plans for five new buildings were approved, and 141 permits were issued for repairs. The building inspector is now about completing a survey of all schools in the city. The survey to date shows much overcrowding and lack of proper ventilation. When this survey is completed, a personal inspection will be made and the number of pupils per school will be reduced so as to conform to the regulation of 300 cubic feet of space for each person therein.

The streets have been kept in uniformly good condition. A few hours overtime each day during the carnival were found necessary in order to take care of the unusually large amount of debris.

The hours of garbage collection have been changed a number of times at the request of the Municipal Engineering Division, who now have charge of the operation of the incinerator. At present the garbage collection begins at 8 p. m. This is too early to get the best results for the labor expended but we are endeavoring to comply with all requests made from the Municipal Engineering Division regarding the collection of garbage.

One additional street sweeper is needed within each district in the city; although the streets are now kept reasonably clean, the addition of one man per district would add much to the efficiency of the work.

COLON HEALTH OFFICE.

Antimalarial work has been extended in the Mount Hope district so as to include several large anopheles breeding areas, notably in pasture No. 12, which is located about three-fourths of a mile from Mount Hope railroad station, and the swamps in the vicinity of the hog farm. These swamps were drained during this quarter and good results are expected from this work. The large swamp located between G Street and New Cristobal is being filled and when completed mosquito breeding in Colon will be practically eliminated.

A permanent concrete drain, approximately 2,000 feet in length, is being installed across fill No. 2-A and 2-B, Mount Hope. We are using coarse coral rock and sand for this drain, instead of Gamboa gravel and sand. Several depressions in the Mount Hope scrap yard were filled during this quarter, and several remain to be filled. These depressions which were caused by the heavy scrap iron, etc., have been a constant source of mosquito breeding during the past, but with the removal of this scrap which is going on rapidly at present, these mosquito-breeding areas will soon be under control. The malarial rate in this district continues to remain low; only 10 cases among employees were reported during the quarter as compared with 8 cases for the corresponding period in 1918.

The large swamp south of the coaling station was filled during the quarter by the Dredging Division, thereby eliminating a large mosquito-breeding area.

There were 25 cases of tuberculosis reported during the quarter, as compared with 16 cases for the same period a year ago.

Ten cases of smallpox were reported from this district from September, 1918, to February 3, 1919. No cases have occurred since

the latter date. The entire population was vaccinated against small-pox during this quarter.

Inspection of meat and meat-food products at Cristobal has been carried on in the usual manner. It was thought advisable to make a careful post-mortem inspection of all viscera and this has necessitated an increase in the veterinary staff. The post-mortem inspection of the viscera has not been done here according to the Bureau of Animal Industry regulations, but with the increase in the staff our inspection will be more thorough than that required by these regulations.

The Colon prophylactic station which was established in June, 1918, was discontinued on January 15, 1919. About 100 registered prostitutes left Colon during the campaign. With this exception, prostitution remains about the same as it did before the campaign was started.

The public health nurse of this office made visits as follows: To tuberculosis patients, 13; home service instruction, 783; hospital clinic, 256; business, 56; She had a total of 159 patients under her care, in their homes.

Quarantines were imposed as follows: Pertusis, 28; measles, 6; mumps, 2; chickenpox, 7; diphtheria, 7; smallpox, 1.

Since February 18, 11 lectures have been given by the public health nurse to the midwives of Colon and Cristobal, the time of each lecture covering two hours.

Forty-five fines were imposed during this quarter for violation of Sanitary Rules and Regulations.

Vincent's angina examinations (2 positive).....	5
Pathological examinations:	
Tissues prepared, autopsy.....	139
Tissues prepared, surgical.....	105
Tissues prepared, animal.....	3
Autopsies performed, human: as follows:.....	71
Diseases—	
Starvation; contributory, paralysis of muscles of deglutition.....	1
Perinephritic abscess.....	1
Organic heart disease.....	5
Yellow fever.....	1
Malnutrition.....	4
Bright's disease.....	1
Tuberculosis of the lungs.....	12
Acute nephritis.....	3
Pulmonary carcinomatosis.....	1
Acute lymphatic leukemia.....	1
Cerebro-spinal fever.....	1
Concussion of the brain.....	1
Acute general peritonitis.....	2
Ruptured aneurysm of the ascending aorta.....	1
Sarcomatosis.....	3
Exhaustive psychosis.....	1
Tuberculous meningitis.....	3
Hydrocephalus.....	1

Autopsies performed, human—Continued:

Diseases—Continued:

Mallformation of intestinal tract.....	1
Broncho pneumonia.....	5
Phlegmonous cellulitis.....	1
Convulsions or children (under 5 years).....	1
Abscess of liver.....	3
Lobar pneumonia.....	4
Pyelo-nephrosis.....	1
Septicemia.....	1
Paralysis without specified cause.....	1
Traumatism by fall.....	1
Diphtheria.....	1
Cerebro syphilis.....	1
Apoplexy.....	2
Softening of the brain.....	1
Rupture of ascending aorta.....	1
Ascariasis.....	1
Diarrhea and enteritis (under 2 years).....	2

Animal autopsies: (1 pig from Corozal farm, 1 alligator)..... 2

Rats examined: (Mus-musculus, 3,223; Mus-Norwegious, 22; Mus-Alexandrix, 399;
Mus-Ratus, 376)..... 4,020

General:

Wasserman reactions.....	3,078
Cattle ears examined for anthrax (4 positive).....	4
Examination of blood of native cattle for trypanosomes.....	3
Imported cattle injected with blood of native animals for "tick fever" immunization (3 deaths).....	43
Examinations of cattle blood for piroplasmata after immunization (32 positive).....	43
Blood smears from Army mules.....	2
Examination of cattle spleen for anthrax (5 positive).....	9
Ear of horse examined for anthrax.....	1
For murrina (2 horses and 1 mule).....	3

Chemical examinations:

Blood analysis for sugar, N. P. Nitrogen.....	1
Urine.....	27
Urine complete, 24 hours.....	1
Stomach contents.....	4
Milk, Sheffield.....	19
Milk (complete analysis) (condensed, 2).....	13
Mother's milk (complete analysis).....	2
Potatoes for water content.....	2
Aspirin tablets for glass.....	10
Powder for cocaine.....	2
Feces.....	1
Medicinal preparation for alcohol.....	1
Soft drinks for alcohol.....	9
Bleaching powder.....	1
Bay rum.....	1
Examination of canned salmon for the Army.....	48
Molasses for sucrose.....	2
Cherries for coloring.....	2
Substance for narcotics (police department).....	2
Coffee for adulteration.....	1
Stomach contents of dog for poison.....	1
Ensilage, Mindi farm.....	1
Cocoa butter (as to purity).....	1
Cotton seed oil (as to purity).....	1
Rum (as to purity).....	1
Dairy feed, Corozal farm.....	3
Miscellaneous.....	4

Spinal fluids, for January, not reported

Colloidal gold test.....	40
Butyric acid test.....	42
Ammonium sulphate test.....	42
Phenol test.....	42

Spinal fluids, for February:

Colloidal gold.....	57
Butyric acid.....	55
Ammonium sulphate.....	55
Phenol.....	52
Gum test.....	29

Entomological examinations:

Identification of mosquitoes, adults:

Culicini—

Anopheles albimanus.....	2,961
Anopheles tarsimaculata.....	61
Anopheles pseudopunctipennis.....	142
Anopheles malefactor.....	22

Total Anopheles.....	3,278
Culex supp.....	358
Mansonia titillans.....	652
Mansonia nigricans.....	25
Aedes calopus.....	52
Aedes specified.....	9
Aediomyia squanipennis.....	3

Total Culicini non-anopheles..... 1,099

Sabeithini—

Wyeomia specified.....	5
------------------------	---

Total mosquitoes..... 4,382

Undertaking Department:

Bodies cremated.....	50
Bodies embalmed.....	14
Bodies shipped to United States.....	10

TABLE XXV.—CONTAGIOUS AND INFECTIOUS DISEASES.

(Reported during the three-month period ending March 31, 1919.)

	Pana- ma.	Colon.	Canal Zone.	Non- resident.	Total.
Chickenpox.....	21	12	2	35
Chancroids.....	3	3
Diphtheria.....	13	7	6	26
